SUMMARY

AI Engineer with hands-on experience building scalable, production-grade AI systems using Python, REST APIs, NestJS, and Generative AI (LLMs, RAG, VLMS). Skilled in designing agentic and multi-agent workflows, and end-to-end ML pipelines, with a strong foundation in data structures, algorithms, multithreading, and system design. Proven ability to deliver full-stack AI products from model integration to containerized deployment.

TECHNICAL SKILLS

Languages: Python, C++, Java, JavaScript, TypeScript, SQL

Libraries: Scikit-learn, PyTorch, TensorFlow, Pandas, NumPy, Matplotlib, OpenCV

Frameworks & Databases: Node.js, NestJS, FastAPI, React.js, REST APIs, WebSockets, Server-Sent Events (SSE), ChromaDB, MongoDB, Milvus

Generative AI & LLMs: Claude, LangChain, LangGraph, Hugging Face, RAG, Large Language Models (LLMs), VLMS, Model Context Protocol (MCP), Agentic AI, Multi-Agent Systems

DevOps & Tools: Docker, Kubernetes, Git, GitHub, CI/CD, JWT Authentication, OAuth, Google Colab

Core Concepts: Data Structures & Algorithms, Machine Learning, Deep Learning, OOP, Multithreading, System Design

EXPERIENCE

AI Intern, Codeacious Technologies

Dec 2025 – Present

- Built a full-stack real-time anomaly detection system using computer vision, RTSP stream ingestion pipelines, and domain-specific rule engines for temporal event analysis across live video feeds.
- Integrated VLM/LLM-based verification pipelines with guardrails and multi-agent k-voting workflows to improve anomaly detection accuracy and reduce false positives.
- Developed scalable AI-powered RAG systems using Milvus, semantic retrieval pipelines, and analytics dashboards for enterprise knowledge querying and monitoring.
- Engineered local LLM-based workflow automation platforms with React, TypeScript, and connector integrations for Gmail, Slack, and OneDrive using secure OAuth flows and IPC handlers.
- Containerized and deployed backend services using NestJS, Docker, and Kubernetes for scalable AI workflow orchestration.

PROJECTS

Klypup – AI-Powered Dynamic Pricing Intelligence Dashboard [GitHub](#)

Tech: FastAPI, React.js, TypeScript, MongoDB, Groq API, LLaMA 3.3-70B, Tailwind CSS, Docker, JWT, SSE

- Built a multi-tenant SaaS pricing dashboard where a 5-agent AI pipeline analyzes competitor prices, demand elasticity, inventory pressure, and compliance rules to generate confidence-scored pricing recommendations with full per-agent reasoning transparency.
- Designed a sequential agentic workflow using the Template Method pattern, where each agent uses LLM tool-calling (ReAct loop) with defensive JSON parsing, nudge-retry, and context-window optimization to operate within 8K-token model limits.
- Engineered a human-in-the-loop approval workflow with deterministic confidence-based routing (auto-approve / pending / escalated), analyst override with price-bound validation, and an immutable audit trail for every price action.
- Implemented tenant-isolated multi-tenancy with org_id extracted exclusively from JWT claims, dual-token auth (15-min access + 7-day rotating refresh), role-based access control, and sliding-window rate limiting with route-specific thresholds.
- Built real-time pipeline progress streaming via Server-Sent Events with asyncio queues, in-memory TTL caching for tool calls, a multi-provider AI fallback chain (Cerebras → Gemini → Groq), and a responsive React frontend with Zustand, React Query, code splitting, and debounced search.

Seva – AI-Powered Food Donation Platform [GitHub](#)

Tech: FastAPI, React.js, MongoDB, PyTorch, YOLOv8, OpenCV, MobileNetV2, WebSockets

- Built a full-stack AI-driven platform connecting hostels and NGOs to reduce food wastage through real-time donation workflows.
- Designed a computer vision pipeline using YOLOv8 for food detection and transfer-learned MobileNetV2 for freshness estimation.
- Engineered a capacity-aware, distance-based NGO matching algorithm with live location tracking and rule-based freshness/expiry validation.
- Implemented real-time notifications and tracking using WebSockets, plus rating and verification workflows for trust and security.

EDUCATION

B.Tech, Computer Science (AI & ML) — KCC Institute of Technology & Management 2022 – 2026

CGPA: 7.69 / 10 (through 7th semester)

Class XII (CBSE), Swami Vivekananda Public School — 91% | Class X — 90%

CBSE District Topper in Mathematics (Top 0.01%)

CERTIFICATIONS, ACHIEVEMENTS & SOFT SKILLS

Certifications & Achievements: HCL JWD AI Certification (2025) • 400+ problems solved on LeetCode • CBSE Mathematics Merit Certificate (2020)

Soft Skills: Problem Solving • Analytical Thinking • Communication • Adaptability • Collaboration • Time Management
